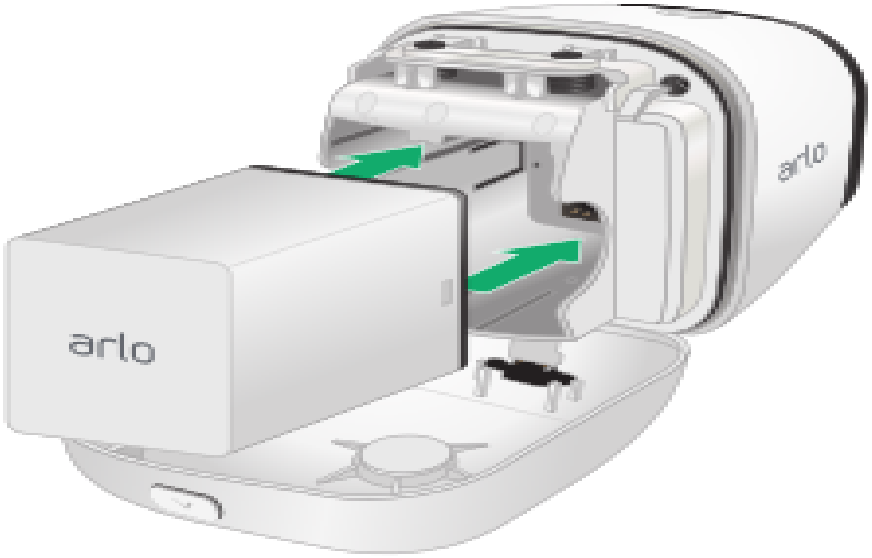
Setup Arlo Go In Easy Steps



Setting up any Arlo device is relatively easy as users get a simple user interface for it. Furthermore, the Arlo app makes it effortless for every user to set up any Arlo product in addition to utilizing it. Thus, to perform the Arlo Go Setup, access, and update it, users can navigate to arlologin.com. On this official webpage, Arlo customers can create an Arlo login account. Moreover, you may effortlessly interact with your camera with the aid of the Arlo app. Before using the camera, it's crucial that you have a consistent internet connection. Also, to keep your Arlo Go camera online, you'll need certain supplies like power cables since it can only connect over a wired connection.

Knowing how to set up your new Arlo Go camera will help in ensuring security and surveillance. Furthermore, its smooth video recording and remote network access allow users to enjoy the feature-rich Arlo Go camera.

Instruction To Set Up Arlo Go Camera

You can set up your camera by following a few easy steps. Before moving on to the steps, make sure to activate the SIM card your cell service provider gave you. Additionally, verify the SIM is on. However, you won't need to activate the same if you have an Arlo Mobile subscription. It serves as your service provider because it comes pre-activated. After that, adhere to the below directions once your SIM card is activated.

- Ensure that your camera is placed where there is robust network connectivity.
- **Note:** Keep the camera outside or in an area with enough network coverage if you have problems getting signals indoors.

- Next, to open the camera's battery compartment, depress the lock on the top of the camera and gently pull it back.
- Put the LTE SIM card in the camera's left card slot. In addition, if you want to store videos locally, install a microSD card on the right slot.

Note: FAT32 is a supported file format for MicroSD, SDHC, and SDXC cards with a maximum storage of 32GB. Use class 4 or higher cards if you want a better performance output. Also, the camera will automatically format the micro SD card to FAT32 if it hasn't been formatted. The same will happen if the card has an unsupported file system.

- Once you have placed the SIM card, you can now line up the battery contacts and put the battery in the camera.
- After that, gently shut the battery lid.

Now that the fundamental camera setup is finished, you may move on to continue further.

Configuring Arlo Go on the Cloud

- Start by downloading the Arlo app on your smart device from its play store or app store.
- **Note:** To create an Arlo account, you can also utilize the standard website URL my.arlo.com.
- Now, launch the Arlo app or use my.arlo.com to log in if you already have an Arlo login account.
- Tap on the Plus icon in the top right corner once you have logged into the account.
- Now press the Continue button.
- Then press the camera's sync button and then release it once you hear a click sound.
- Use your camera to read the QR code displayed on the mobile device. You will hear a chime sound coming from the camera when the QR code has been successfully scanned.
- After that, tap "Yes, I heard a chime" if the sound is audible. Tap on Back to rescan the QR code if you don't hear any sound.
- **Note:** To safely scan the code, move the camera to either closer or distant position.
- Now, wait for a couple of minutes for the Arlo app to find your camera.
- Give your camera a name and tap on the Next button on the following screen.

- Next, click the Continue button if you are an Arlo Mobile service subscriber. If you're creating a new Arlo account, fill out the form, choose a subscription plan, and then hit the Continue button.
- Now carefully read the summary of the Arlo Service and Subscription, then click the Check Out button.
- Your services will be activated once you enter your billing information.
